

LIPEÑA PROJECT

Copper – Gold – Silver Hydrothermal Breccia System

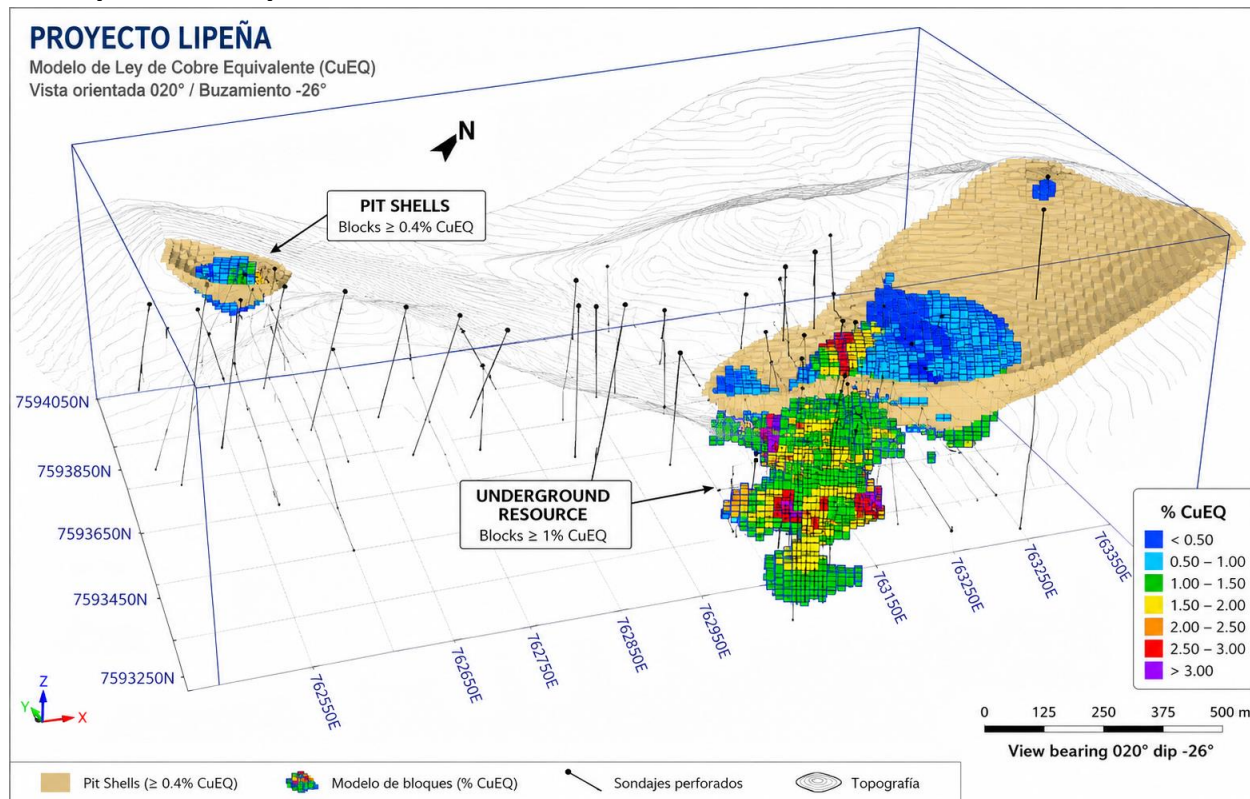

Southwest Bolivia

EMPRESA MINERA MARTE S.R.L. | PROYECTO LIPEÑA

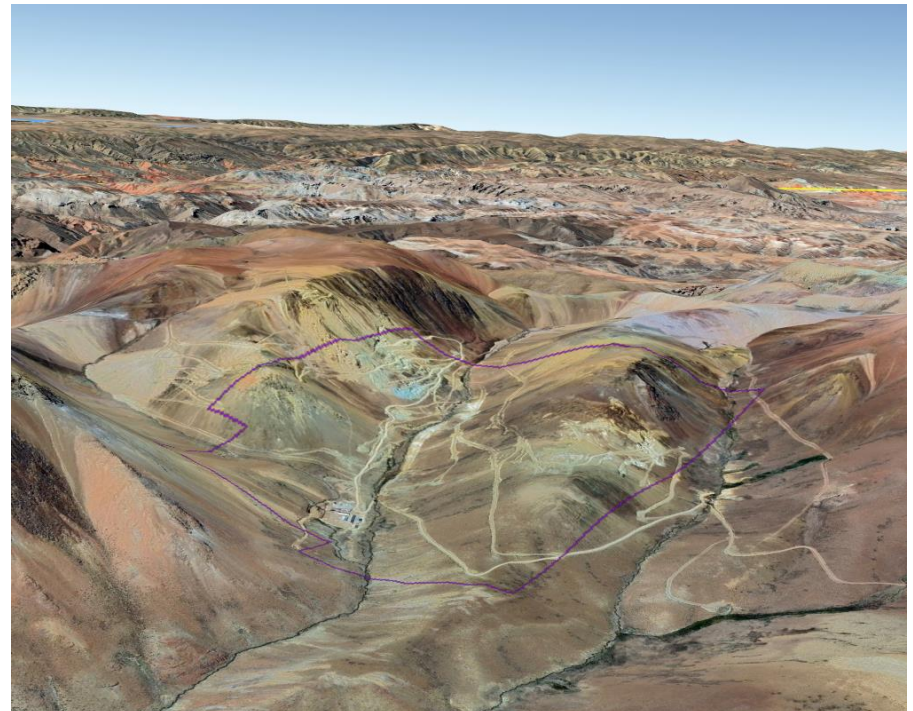

Project Highlights

- Large Cu-Au-Ag hydrothermal breccia system
- Historical NI 43-101 resource estimate
- Strong drill intercepts with Au-Cu mineralization
- Potential concealed porphyry system at depth
- Significant exploration upside

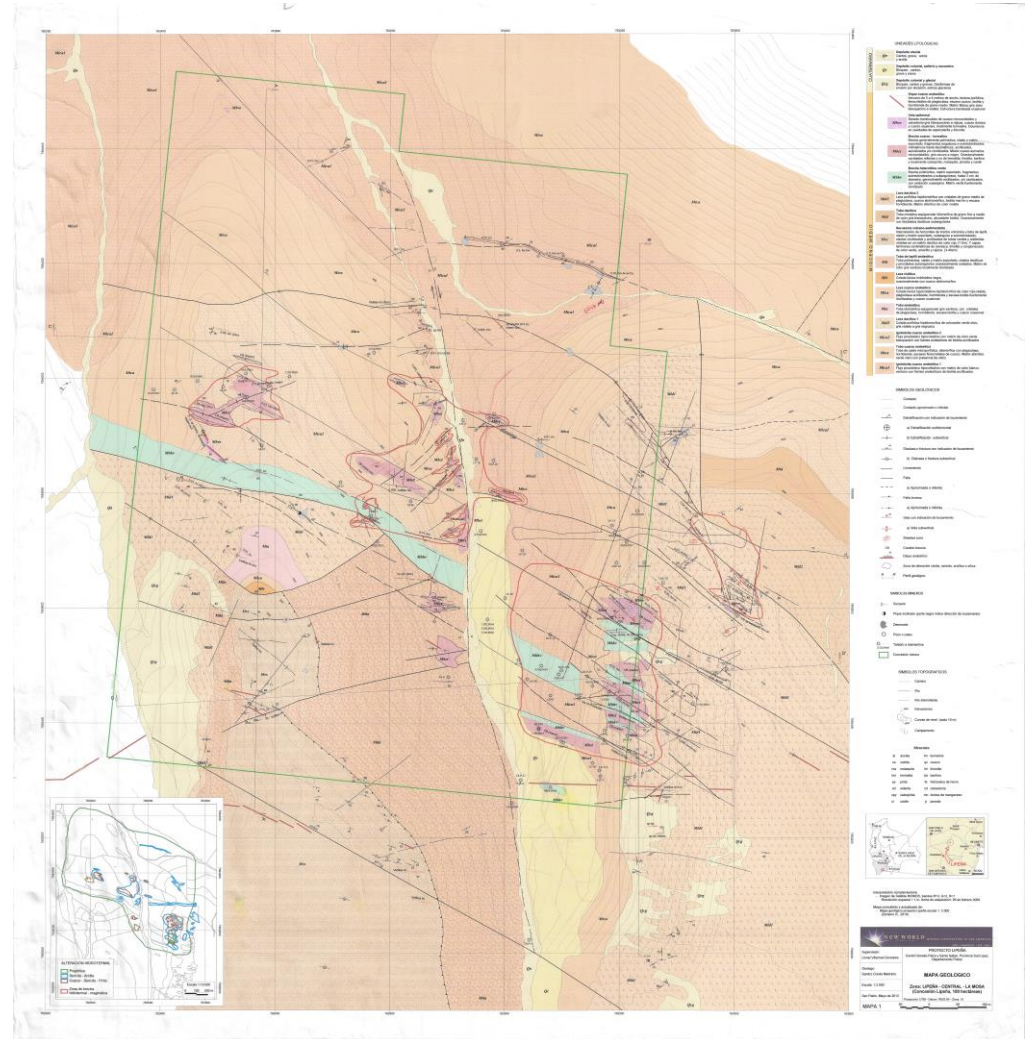

Project Location

- Sud Lípez, Potosí, Bolivia
- Andean metallogenic belt
- Regional mining infrastructure access
- Strategic geological setting

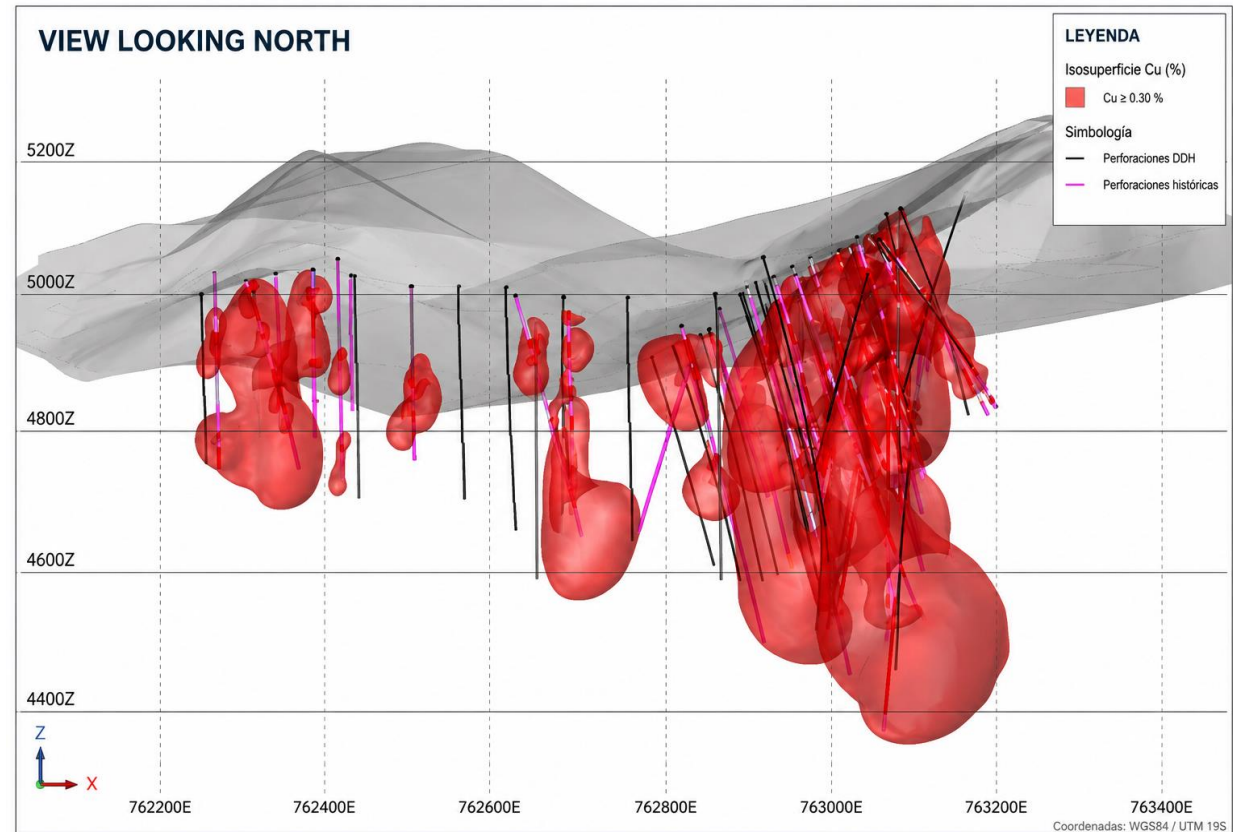

Regional Geological Setting

- Tertiary volcanic complexes
- Caldera-hosted hydrothermal system
- Strong structural controls
- San Vicente regional fault system

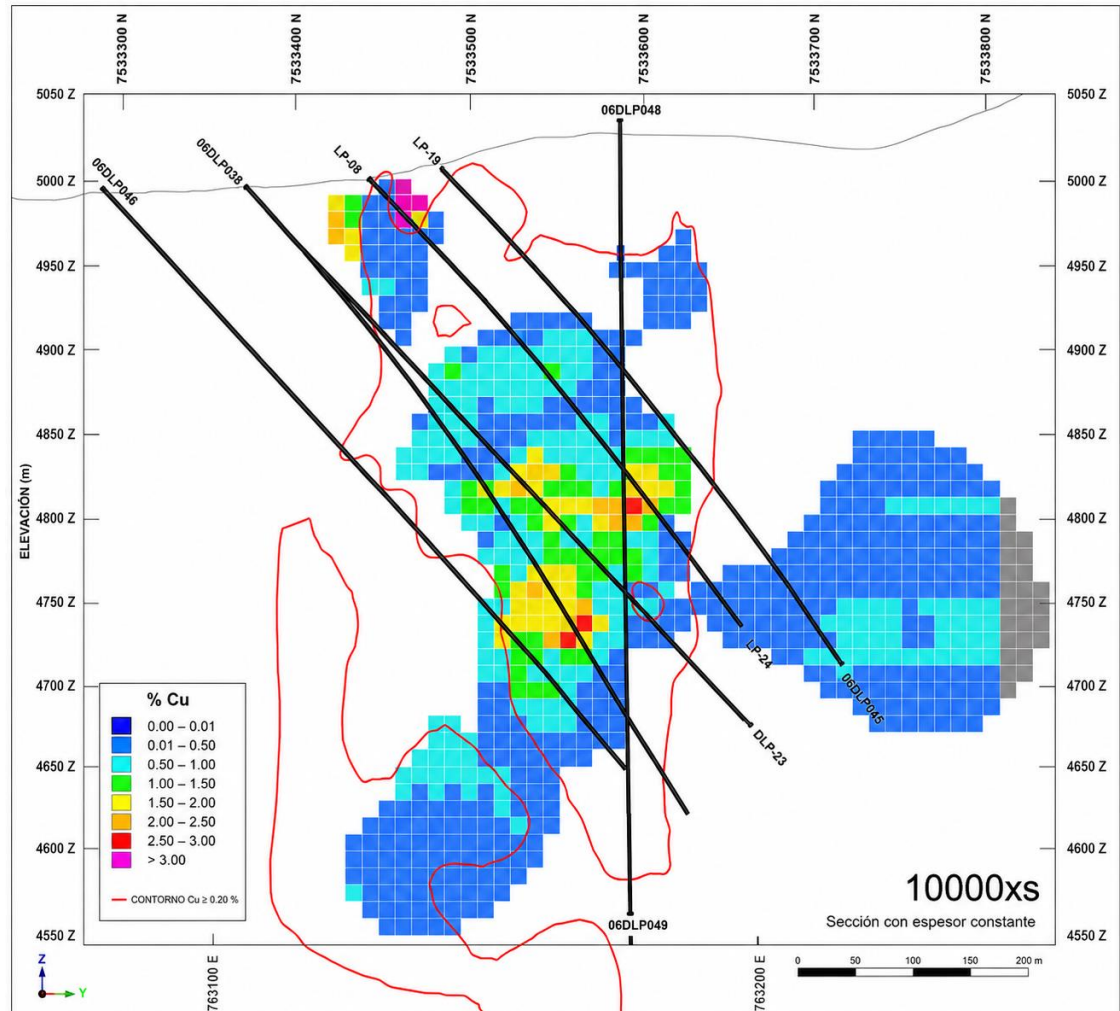

Deposit Model

- **Hydrothermal breccias with Cu-Au-Ag mineralization**
- **Tourmaline breccia associations**
- **Stockwork and vein systems**
- **Possible deep porphyry feeder**

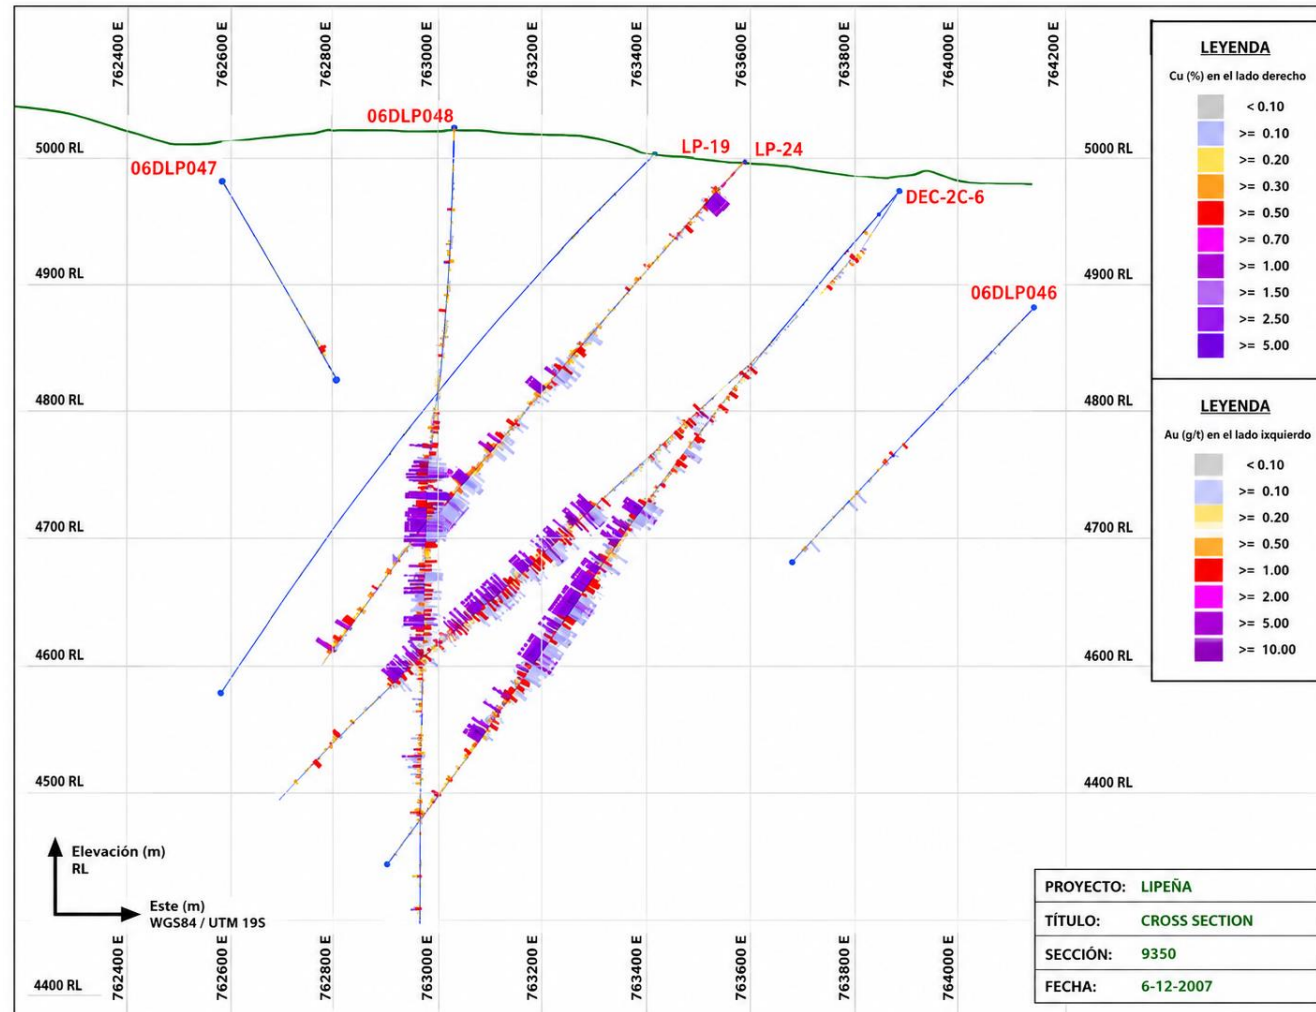

Historical Resource Estimate

- Open pit and underground resources
- Indicated and inferred categories
- Historical NI 43-101 compliant estimate
- Mineralization open at depth and strike

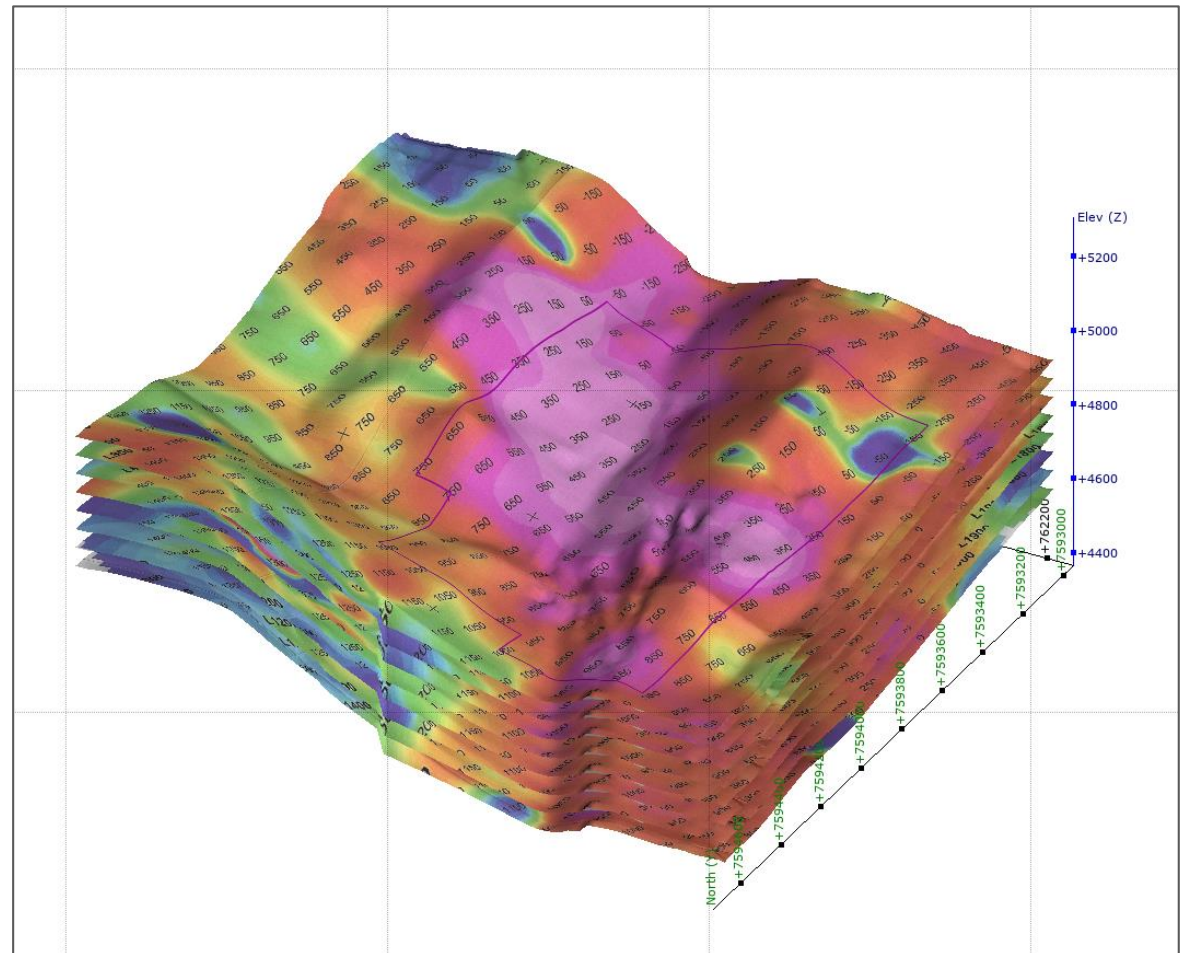

Significant Drill Historic Intercepts

LP-17A:	7.6m @ 57.23% Cu
DLP-24:	16.8m @ 47.08% Cu
including:	25.9m @ 35.30% Cu
LP-13:	18.2m @ 42.30% Cu
DLP-07:	9.1m @ 40.75% Cu
DLP-21:	7.7m @ 27.64% Cu
LP-08:	7.6m @ 27.07% Cu
LP-09:	13.7m @ 25.80% Cu
including:	38.1m @ 19.84% Cu
LP-03:	108.2m @ 24.06% Cu
DLP-23:	117.4m @ 12.02% Cu
including:	13.6m @ 19.60% Cu
LP-12:	51.9m @ 12.47% Cu
LP-15:	24.4m @ 5.16% Cu
including:	16.8m @ 8.67% Cu
06DLP-47:	212m @ 1.48% Cu
including:	70m @ 3.17% Cu
including:	8m @ 7.50% Cu

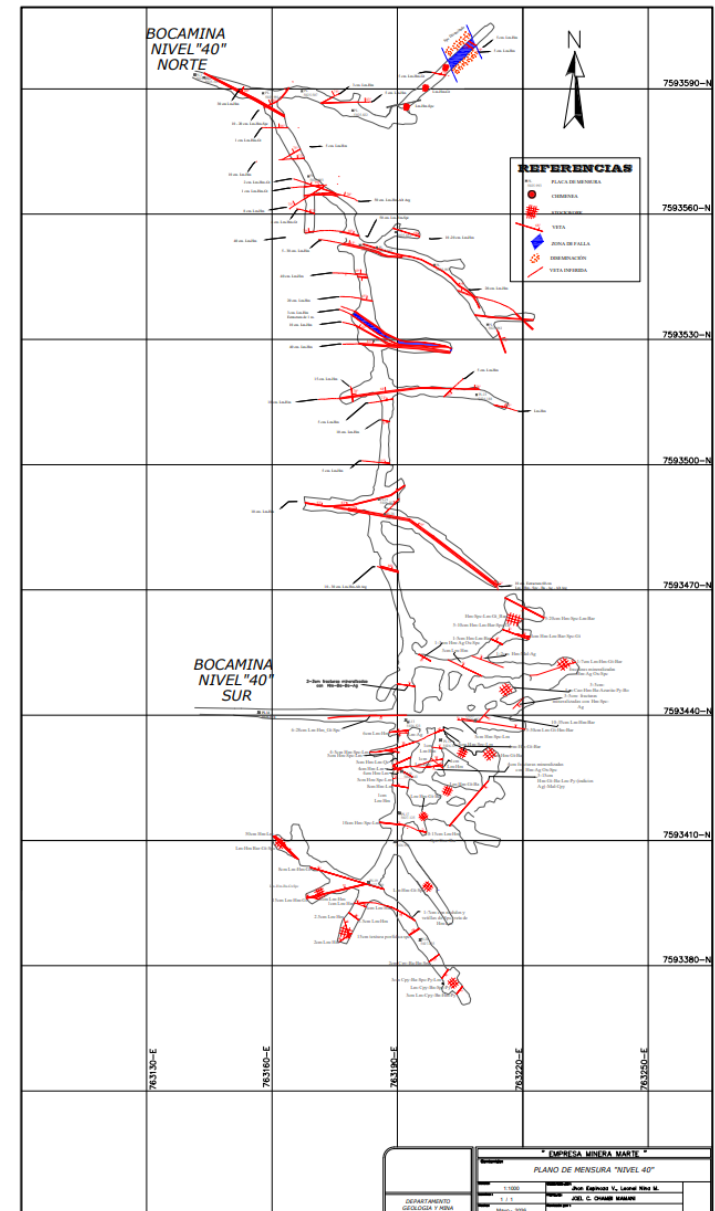

Integrated Geophysics

- **Historical IP-magnetic surveys**
- **Deep conductivity anomalies**
- **Priority drill targets identified**

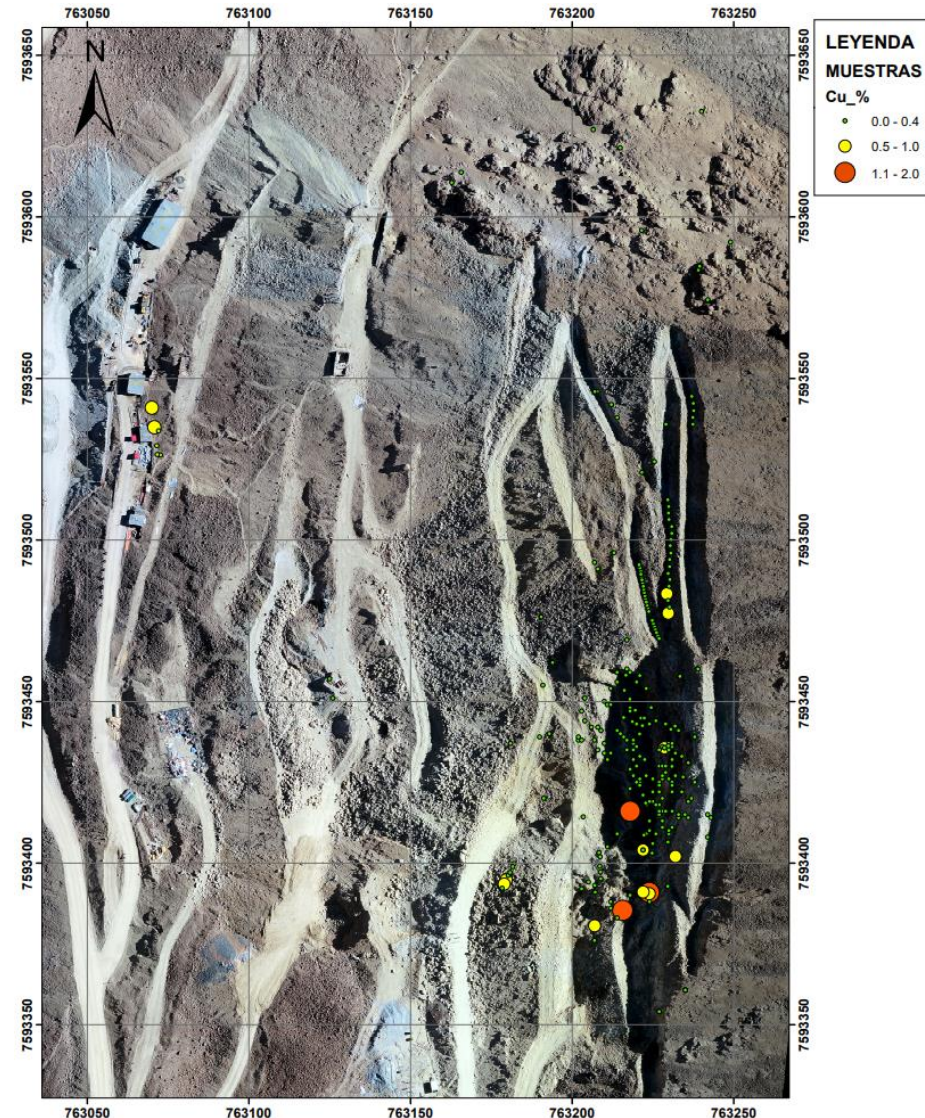

Underground Geological Mapping

- Stockwork mineralization identified
- Specularite, chalcopyrite and bornite observed
- Hydrothermal alteration zones mapped
- Structural continuity validated underground

Geochemical Anomalies

- High Cu anomalies in underground levels
- Silver anomalies associated with vein systems
- Strong correlation with mapped structures
- Multiple expansion targets

Exploration Upside

- **Open mineralization at depth**
- **Untested geophysical anomalies**
- **Potential concealed porphyry**
- **District-scale potential**

Current Work Program

- Core relogging
- Database validation
- QA/QC review
- 3D geological modeling
- Technical data room preparation
